SUMMARY

Python engineering leader with 7+ years on one multi-carrier shipping platform, from contract engineer to Director of Technology through its acquisition by Bringg. Still hands-on: I built 51 of the platform's 221 carrier integrations, led its move from Heroku to GCP/Kubernetes, and now lead a team of 4 engineers and 1 QA. Strongest in logistics, carrier and commerce integrations, and keeping production reliable.

WORK EXPERIENCE

BRINGG (acquired Zenkraft in 2022) *Prague, CZ (remote)*

Director of Technology *Apr 2025 – Present*

- Lead engineering for the Zenkraft multi-carrier shipping API: 4 senior engineers and 1 QA, all hired and mentored by me. I own the technical roadmap and report status and risks to executive leadership.
- Delivered dedicated integrations for 13 enterprise customers, mostly work that kept existing accounts.
- Replaced Black Friday firefighting with a plan after a rough 2024 peak: capacity planning, Kubernetes autoscaling, batch shipment preparation and live metrics. The 2025 peak went smoothly.
- Led the carrier API migrations forced by sunsets (UPS and FedEx SOAP to REST, USPS, Royal Mail, DHL Germany, Yodel to InPost). The UPS integration alone covers 8.6M shipments.
- Main technical contact for carriers and customers: certifications, new carrier APIs and incident timelines. Handled regulatory changes such as the UK Windsor Framework and EU de minimis removal.
- Built Claude Code agents and skills for my team and others, including a self-service production data assistant for customer success and product.

Engineering Team Lead *Aug 2023 – Apr 2025*

- Led a distributed backend team that grew from one team to three (about 11 people at peak), while staying hands-on in architecture, code review and incidents.
- Led the Heroku to GCP/Kubernetes migration: hosting cost fell by about half while shipments grew about 7x.
- Set up observability from scratch (metrics, alerting, post-release checks) and used it to fix request hangs, 502s, pod crashes and DB deadlocks. Production incidents went from roughly monthly to about two a year.
- Built the Bringg and Delivery Hub v2 integrations, and hired an engineer who was later promoted to Tech Lead.

Senior Software Engineer *Aug 2022 – Aug 2023*

- Technical owner of day-to-day engineering through the Bringg acquisition; led the move of Zenkraft into Bringg's product and cloud.
- Hired and onboarded backend engineers, set technical practices and supported carrier operations.

ZENKRAFT *Remote*

Python Engineer (contract) *Jul 2019 – Aug 2022*

- Rebuilt the platform on Heroku/PostgreSQL, moved it to Python 3, and wrote 78% of all code changes in 2020.
- Grew carrier coverage from about 25 to 221 integrations. I built 51 myself and wrote the framework that cut new integrations from weeks to days.
- Built background processing (Celery, Redis, priority queues), webhooks and SFTP ingestion, plus integrations with Salesforce Commerce Cloud, Newstore and Shopify.

INDEPENDENT *Brno, CZ / Bratislava, SK (remote)*

Python Software Engineer / Data Engineer (freelance) *Feb 2016 – Aug 2022*

- Delivered 50+ projects for small businesses and startups (APIs, web apps, automation, scraping), working directly with owners and founders, including Newchip and Sonder.

SKILLS

Technical: Python, Django, FastAPI, Flask, Celery, pytest, OpenAPI, PostgreSQL, Redis, Elasticsearch, MongoDB, GCP, Kubernetes, Heroku, AWS, Docker, CI/CD
Leadership: hiring and mentoring, roadmaps, incident management, carrier and customer liaison, peak-season planning
Languages: English (C2), Slovak (C2), German (A1), Indonesian (A1)

EDUCATION

Masaryk University, Brno: Applied Informatics *2014 – 2016*
Masaryk University, Brno: Bachelor's in Computer Systems and Data Processing *2011 – 2014*
